

Basic Product Characteristics

Our fasteners are available in three different base materials; this is how their characteristics relate:

Material	Strength	Flexibility	Melt Temperature	Chemical	Abrasion Resistance
Polypropylene (PP)	Lowest	Intermediate	Lowest	High	Intermediate
Polyurethane (PU)	Intermediate	Highest	High	High	Lowest
Nylon (PA)	Highest	Lowest	Highest	High	Highest

Shapes and Measurements

Our fasteners are available in seven basic shapes with different options of material, strength, length and color.

Paddle Fasteners

The most commonly used shape for garment tagging applications. Its larger end, the paddle, is designed in a way that once applied it will not come back through the hole in the tag. It also gives the consumer a larger surface to hold and pull when removing. They come in Fine Fabric, Standard, Heavy Duty and S1000 rolls.

T-End™ Fasteners

More discreet than the paddle fasteners, T-Ends are used for tagging, pairing products and packaging. Available in: Micro, Fine Fabric, Standard, Heavy Duty, Super Heavy Duty and Extra Heavy Duty.
